

Human Computer Interaction, 2024 Fall

Homework 4: Detailed Design / Wire-framing

Due Nov. 13, 2024

(Web based) Ticketing System (Continued)

Detailed Design / Wire-framing: Sketch out the interaction flow and detailed design of your (web-based) ticketing app using a wire-framing tool such as Adobe XD or Figma. If Adobe XD/Figma cannot fully describe your design, you can use Powerpoint/Word (or other medium) along with the wire-framing tool. For instance, if your application includes an external AI module, you can separately describe its prospective working in Word or Powerpoint, or attach captured drawings in the wire-framing file. Your presentation should highlight the **major distinguishing features** and include **justifications** for your design. You are free to update your interaction and interface design from Homework 1 and 2.

What to submit:

- (a) Wire-framing files / any additional documents which should include short explanation of why you designed things the way they were.
- (b) Powerpoint presentation OR video capture (with explanation) of the wire-frame design.
